

Logo Animation PROMPTS

1. 3D Acrylic Logo Extrusion Reveal

Prompt:

Create a realistic VFX-style reveal of a **3D acrylic letter logo** mounted on a wall. This is purely an animation of the existing logo appearing in the scene—not a redesign or recreation of the environment.

Keep the uploaded image as the base reference. Maintain the **exact same camera angle, composition, perspective, lighting, and background** throughout the entire animation. The only animated element should be the logo itself. Every other part of the scene must remain perfectly still, as if the animation is composited onto a single photograph. By the final frame, the scene should be visually identical to the original reference image.

Animation Timeline

0:00 – 0:02

Begin with the wall completely empty, with no logo visible.

Introduce a very subtle cinematic push-in (slow zoom).

0:02 – 0:04

The main logo text gradually emerges from the wall, growing from a flat surface into its full 3D acrylic depth.

Letters appear smoothly from left to right.

As the depth increases, soft realistic shadows naturally form beneath the raised letters.

0:04 – 0:06

The secondary text appears using the same extrusion effect.

It builds into place while maintaining its exact position relative to the main logo.

0:06 – 0:10

The full logo is now completely visible, matching the reference image exactly.

Hold on the finished logo while the gentle push-in continues until the animation ends.

Constraints

Keep the logo in its exact original position.

Preserve the original camera angle and framing; only a minimal forward push-in is allowed.

Do not modify the wall, lighting, colors, or background.

Do not add or remove any objects.

No transitions, cuts, or scene changes.

No people, voices, or audio.

Total duration: **10 seconds**.

2. Create a clean logo reveal featuring the text "[**LOGO NAME**]" in white.

The logo should appear **one letter at a time from left to right**, with each letter smoothly popping out into place. The animation should feel polished, modern, and natural.

Animate only the **people** visible in the image. They should perform subtle, realistic movements such as blinking, slight head movement, natural breathing, or small body shifts. Their appearance, clothing, and positions must remain unchanged.

Everything else in the image—including the background, objects, lighting, colors, and composition—must remain completely static, exactly matching the uploaded reference.

Keep the **camera perfectly locked** throughout the animation with **no zoom, pan, tilt, or movement**.

By the end of the animation, the full "[**LOGO NAME**]" should be completely visible while the rest of the scene remains identical to the original image.

Constraints

Reveal the logo one letter at a time from left to right.

Use a subtle pop-out effect for each letter.

Animate only the people in the scene.

Preserve all original colors, lighting, textures, and composition.

Do not move or alter any background elements.

No camera movement or reframing.

No additional text, graphics, transitions, or visual effects.

Final frame should closely match the original reference image with the completed logo reveal.

3. Embroidery Stitch Logo Reveal

Prompt:

Create a realistic **macro embroidery animation** where the uploaded image logo is stitched directly onto woven cotton fabric.

Start with a close-up view of the fabric, completely blank with no logo visible. Colored embroidery threads should naturally emerge from the fabric and stitch themselves into place, forming the logo one section at a time. The thread should lay down in smooth, tight satin stitches, building the design gradually with realistic depth and texture.

As the embroidery progresses, the stitched logo gains dimensional detail, with each row of thread appearing neatly woven and pulled taut until the entire logo is fully embroidered. The movement should feel smooth, satisfying, and slightly time-lapse in style.

Keep the camera completely steady throughout the animation. Use soft natural side lighting to highlight the texture of the fabric, individual fibers, and the subtle sheen of the embroidery thread. A shallow depth of field should enhance the realistic macro look.

The thread should animate on its own—no hands, tools, or embroidery machine should appear.

The entire animation must be completed in a **single continuous shot** with no cuts or scene changes.

Constraints

Start with plain fabric and no logo.

The logo is created entirely through self-stitching embroidery.

Build the embroidery progressively until the complete logo is visible.

Preserve the full logo within the frame at all times—**do not crop any part of it**.

Keep the camera locked with no panning, tilting, or zooming.

No extra objects, text, transitions, or visual effects.

One continuous shot with a realistic macro, photorealistic appearance.

4. Neon Sign Flicker Reveal

Prompt:

Create a realistic **neon sign reveal animation** using the uploaded image as the reference. This is a **VFX animation only**—do not redesign, regenerate, or modify the original scene.

Keep the **exact same camera angle, framing, perspective, lighting, and composition** throughout the animation. The only element that should animate is the **neon sign**. Everything else, including the background, wall, and surrounding environment, must remain completely static, as if the effect is composited onto a still photograph. The final frame should match the uploaded reference image exactly.

Animation Timeline

0:00 – 0:02

Begin with the signboard blank, with no illuminated lettering visible.

Add a very subtle cinematic side-to-side camera sway for a natural handheld feel.

0:02 – 0:06

The neon letters illuminate **one by one from left to right**.

Each letter briefly flickers once or twice, like a real neon tube powering on, before glowing

steadily.

Continue until the entire sign is illuminated.

0:06 – 0:10

The full neon logo remains brightly lit, matching the reference image exactly.

Maintain the gentle side-to-side camera movement until the animation ends.

Constraints

Reveal the neon lettering one letter at a time from left to right.

Keep the sign in its exact original position.

Preserve the original camera framing and perspective.

Only a subtle side-to-side camera sway is allowed.

Do not alter the background, colors, lighting, or surrounding objects.

Do not add extra text, graphics, or visual effects.

No cuts, transitions, or scene changes.

No people, voices, or audio.

Total duration: **10 seconds**.

Perfect. I'll keep the style consistent with the previous prompts—clean, easy to understand, and optimized for modern AI video models like Veo, Kling, Seedance, Hailuo, PixVerse, etc.

5. Liquid Metal Logo Formation

Prompt

Create a realistic **liquid metal logo reveal** using the uploaded image as the final reference. This is a **VFX animation only**—do not redesign or regenerate the scene.

Maintain the exact camera angle, framing, lighting, colors, and composition throughout the animation. The environment must remain completely static. Only the logo animates.

The animation begins with no visible logo. Streams of molten chrome (or liquid gold) flow naturally across the surface, merging together into the logo's exact shape. The liquid gradually solidifies into a smooth, polished metallic finish with realistic reflections and subtle surface details.

The transformation should feel premium, fluid, and satisfying, with natural metallic movement and seamless transitions.

By the end of the animation, the completed logo should perfectly match the uploaded reference image.

Constraints

Animate only the logo.
Preserve the original scene exactly.
Keep the camera completely locked.
Use realistic metallic reflections and fluid simulation.
No extra objects or particles beyond the liquid metal.
No scene changes or transitions.
Final frame must match the reference image.
Total duration: **8–10 seconds**.

6. Water Ripple Logo Reveal

Prompt

Create a realistic **water ripple logo reveal** using the uploaded image as the final reference. Keep the camera angle, framing, lighting, and composition exactly the same throughout the animation. The background remains completely static. The surface begins clean with no logo visible. Gentle water ripples spread naturally across the surface. As the ripples move outward, the logo gradually appears beneath the water, becoming clearer with each passing wave. The water slowly settles until the logo is fully visible in its exact original position. The motion should feel calm, elegant, and highly realistic, with accurate reflections, refractions, and soft water movement. The completed logo should match the uploaded reference image exactly.

Constraints

Only animate the water and logo reveal.
Do not move or modify the environment.
Keep the camera fixed.
Use realistic water physics.
No splashes or dramatic waves.
No cuts or transitions.
Final frame identical to the reference.
Duration: **8–10 seconds**.

7. Ice Freeze Logo Reveal

Prompt

Create a photorealistic **ice crystal logo reveal** based on the uploaded reference image.

The camera remains completely fixed throughout the animation. Do not alter the lighting, background, or composition.

Begin with the logo completely invisible. Frost slowly spreads across the surface, growing organically with intricate ice crystal patterns. As the frost expands, the logo gradually forms beneath the frozen layer. The ice becomes thicker and more detailed until the logo is fully revealed with beautiful crystalline texture.

In the final moments, the frozen logo remains perfectly still, matching the uploaded reference while retaining realistic frosted detail.

The animation should feel smooth, satisfying, and naturally occurring.

Constraints

Only animate the frost and logo.

Preserve the entire environment.

No snowfall.

No camera movement.

No additional objects.

One continuous shot.

Final frame matches the reference.

Duration: **8–10 seconds.**

8. Fire Forging Logo Reveal

Prompt

Create a cinematic **forged metal logo reveal** using the uploaded image as the final reference.

Keep the uploaded scene unchanged throughout the animation. Only the logo is animated.

The animation begins with no visible logo. Glowing molten metal gradually emerges in the shape of the logo, as if being forged under intense heat. Bright orange metal cools naturally into its final material while subtle sparks, tiny embers, and heat shimmer enhance the realism.

As the glow fades, the logo settles into its finished appearance, matching the uploaded reference exactly.

The overall feel should resemble professional blacksmith craftsmanship with premium cinematic lighting.

Constraints

Animate only the logo.

Preserve the background completely.

Use realistic molten metal effects.

Keep sparks subtle.

No explosions.

No camera movement.

No scene transitions.

Final frame identical to the uploaded reference.

Duration: **8–10 seconds.**

9. Smoke Formation Logo Reveal

Prompt

Create a realistic **smoke formation logo reveal** using the uploaded image as the final reference.

Maintain the exact camera angle, framing, lighting, and environment throughout the animation. The scene begins with no visible logo. Wisps of soft smoke drift naturally through the air before gradually gathering into the shape of the logo. As more smoke converges, the logo becomes increasingly solid and defined until it reaches its finished appearance.

The smoke movement should be elegant, slow, and physically realistic, with subtle turbulence and natural flow.

The final logo should perfectly match the uploaded reference image.

Constraints

Animate only the smoke and logo.

Keep the environment static.

No heavy fog.

No explosions.

No camera movement.

No additional visual effects.

Final frame identical to the reference.

Duration: **8–10 seconds.**

10. Sand Reveal Logo

Prompt

Create a realistic **sand reveal animation** using the uploaded image as the final reference.

Keep the original camera angle, lighting, colors, and composition unchanged throughout the animation.

The scene begins with the logo completely hidden beneath a thin layer of fine sand. A gentle breeze naturally sweeps across the surface, slowly blowing the sand away. As the sand clears, the logo gradually appears in its exact original position. Tiny grains continue moving naturally

until the entire logo is fully uncovered.

The animation should feel calm, satisfying, and highly realistic, with believable sand physics and subtle dust movement.

By the end of the animation, the scene should match the uploaded reference image exactly.

Constraints

Animate only the sand.

Preserve the entire environment.

Keep the camera fixed.

No dramatic wind.

No extra objects.

No scene changes.

Final frame identical to the reference.

Duration: **8–10 seconds.**

11. Hologram Projection Logo Reveal

Prompt

Create a futuristic **hologram logo reveal** using the uploaded image as the final reference. This is a VFX animation only—do not redesign or regenerate the scene.

Keep the camera angle, framing, lighting, and composition exactly the same throughout the animation. The environment remains completely static.

The animation begins with no visible logo. Thin beams of blue-white light project upward, gradually forming a translucent holographic outline. The hologram becomes brighter and more detailed as glowing scan lines build the logo layer by layer. Once fully formed, the holographic effect slowly transitions into the final solid logo, perfectly matching the uploaded reference image.

The animation should feel clean, futuristic, and premium, with subtle light diffusion and realistic holographic flicker.

Constraints

Animate only the logo.

Preserve the original environment.

Keep the camera completely locked.

Use subtle holographic scan lines and light effects.

No extra floating UI, particles, or sci-fi objects.

No scene transitions or cuts.

Final frame must exactly match the reference image.

Duration: **8–10 seconds.**

12. Leather Emboss Logo Reveal

Prompt

Create a realistic **leather emboss logo reveal** using the uploaded image as the final reference. Keep the camera angle, lighting, framing, colors, and composition exactly the same throughout the animation.

Begin with a smooth leather surface with no visible logo. The leather gradually compresses inward as if pressed by an invisible embossing die. Fine wrinkles and natural leather texture respond realistically as the logo slowly emerges as a clean embossed impression. Soft shadows develop around the recessed details, giving the logo realistic depth and craftsmanship.

The animation should feel premium, elegant, and highly realistic.

Constraints

Animate only the embossed logo formation.

Preserve the leather texture and surrounding scene.

No visible tools or stamping machine.

Keep the camera fixed.

No extra objects or effects.

Final frame must match the uploaded reference.

Duration: **8–10 seconds.**

13. Chocolate Pour Logo Reveal

Prompt

Create a realistic **chocolate logo formation** using the uploaded image as the final reference. Maintain the exact camera angle, framing, lighting, and composition throughout the animation. The animation begins with no visible logo. Smooth melted chocolate flows naturally across the surface, filling the logo shape with rich, glossy liquid. The chocolate settles evenly with realistic viscosity, soft ripples, and subtle reflections before becoming perfectly smooth. As it finishes settling, the completed logo matches the uploaded reference image exactly.

The motion should feel luxurious, satisfying, and highly realistic.

Constraints

Animate only the flowing chocolate.

Preserve the surrounding environment.

Use realistic liquid movement.

No splashes or excessive mess.

Keep the camera locked.

No scene changes.

Final frame identical to the uploaded reference.

Duration: **8–10 seconds.**

14. Soap Bubble Logo Reveal

Prompt

Create a playful yet realistic **soap bubble logo reveal** using the uploaded image as the final reference.

Keep the camera angle, framing, lighting, colors, and background unchanged throughout the animation.

The animation begins with no visible logo. Tiny iridescent soap bubbles gently float into the scene from different directions. The bubbles naturally gather together, gradually forming the outline and shape of the logo. Once complete, the bubbles softly pop one by one, revealing the finished logo underneath exactly as shown in the uploaded reference image.

The movement should feel light, elegant, and natural, with realistic reflections and transparent bubble surfaces.

Constraints

Animate only the bubbles and logo reveal.

Preserve the original environment.

No strong wind.

Keep the camera fixed.

No additional objects or effects.

Final frame must match the reference image.

Duration: **8–10 seconds.**

15. Cloth Unveil Logo Reveal

Prompt

Create a premium **cloth reveal animation** using the uploaded image as the final reference.

Keep the original camera angle, framing, lighting, colors, and composition exactly the same throughout the animation.

Begin with the logo completely covered by a luxurious silk fabric. The cloth naturally drapes over the logo with realistic folds and soft fabric physics. A gentle invisible force slowly pulls the fabric away, revealing the logo beneath in its exact original position. The cloth continues flowing

smoothly out of the frame while the finished logo remains perfectly still.

The animation should feel elegant, cinematic, and realistic.

Constraints

Animate only the cloth.

Preserve the environment completely.

Use realistic silk fabric simulation.

Keep the camera locked.

No extra objects or transitions.

Final frame must match the uploaded reference.

Duration: **8–10 seconds.**

16. Shadow Reveal Logo

Prompt

Create a cinematic **shadow reveal animation** using the uploaded image as the final reference.

Keep the camera angle, framing, lighting, colors, and environment exactly the same throughout the animation.

The animation begins with the logo completely invisible. A soft moving shadow gradually passes across the surface. As the shadow travels, the logo subtly appears within the shaded area, becoming clearer as the shadow continues moving. Once the shadow completely passes, the fully revealed logo remains in place, perfectly matching the uploaded reference image. The transition should feel smooth, subtle, and naturally driven by changing light rather than artificial effects.

Constraints

Animate only the moving shadow and logo reveal.

Preserve the original background and composition.

Keep the camera completely locked.

Use soft, realistic lighting and shadow movement.

No additional objects or effects.

No cuts or scene changes.

Final frame must exactly match the uploaded reference.

Duration: **8–10 seconds.**
